DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I in the reply filed on 11/23/04 is acknowledged. The traversal is on the ground(s) that the characterization of the claims contradicts their inventive elements. This is not found persuasive because of the reasons set forth in the requirement.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Russell et al. US 5,354,420.

Regarding claims 1 and 17, Russell '420 discloses an apparatus for laser etching comprising an open air region for processing substrates, a laser therein, and a halogen gas supply

Art Unit: 1754

(see abstract and Figs), which would inherently be capable of chemically reacting, dissipating, and configurable to the claimed aspect and removal ratios.

When the examiner has reason to believe that the functional language asserted to be critical for establishing novelty in claimed subject matter may in fact be an inherent characteristic of the prior art, the burden of proof is shifted to Applicant to prove that the subject matter shown in the prior art does not possess the characteristics relied upon. In re Fitzgerald et al. 205 USPQ 594. As a practical matter, the Office is not equipped to manufacture or obtain products and make resulting comparisons with the claimed invention.

Regarding claims 2-5, Russell discloses laser etching, which would at least suggest mechanisms for holding the substrate and moving the laser to perform the disclosed energizing and etching.

Regarding claims 6-8, Russell discloses means for gas supply (see Fig. 6).

Regarding claim 9, Russell discloses halogen gases and sulfides (column 17, bottom), which would at least suggest halosulfide.

Regarding claims 10-16 and 18-20, Russell discloses a laser, semiconductor etching, silicon and various halocarbons

(Table 2) and it would be obvious to use close variants thereof through routine experimentation.
